What do we do?

Pathfinder Clean Energy is a global developer and investor in clean energy, committed to creating low-carbon energy to the benefit of the environment and community.

PACE intends to build and operate its low carbon projects and so building strong links with the local community is important to us.

Our designs are still in the development stages, so our design proposals will evolve as we gather local input and consider the results of our specialist environmental assessments and surveys.

What is proposed?

The site comprises approximately 122.8ha of agricultural land. Once operational, the solar farm and battery storage will have a capacity of up to 49.5MW and will be operational for 40 years. After 40 years, the installation will be removed and the land will be restored to agricultural use, but with enhanced soil health and biodiversity.

A package of landscape, ecological and biodiversity benefits is also proposed, including biodiversity areas with proposed wildflower and tree planting. Existing hedgerows along the site boundary would be bolstered with additional hedgerow planting to provide natural screening where appropriate.
